

Proactive Disaster Risk Management transitions communities from a cycle of recovery to a trajectory of sustained development, fostering adaptive capacity and systematically reducing vulnerabilities

With global challenges escalating and disasters threatening development gains, **building resilient societies is more urgent than ever.**

We invite professionals, policymakers, researchers, and leaders to our comprehensive **Disaster Risk Management for Sustainable Development Course**. This program offers a holistic approach, intertwining risk reduction with sustainable development.

You'll gain:

- Advanced risk assessment and analysis skills.
- Strategies to integrate disaster risk reduction (DRR) into development planning.
- Expertise in multi-sectoral DRR strategy implementation.
- Skills in leveraging innovative technologies and data analytics.
- A deep understanding of international frameworks like the Sendai Framework and SDGs.
- The capacity to champion community-based resilience.

This training course is a **hybrid modality**:

- **Online Phase:** 8-13 December 2025
- **Face to Face Phase:** 15-19 December 2025
